

How to Search for a Book

Once you have logged into your MyBeeble account, you are taken to the landing page where you select if you are Searching for a book or Posting a book.

Select the button on the left. (Search for a Book)

This takes you to the Search Books page, there are several fields of information that you need to provide in order to generate the results you are looking for.

The top field is best utilized if you know the exact ISBN number. Of course you can conduct a search by Title, Author and Keyword.

In the field just below that to the left (Zip Code), if you have Location settings to allow on the MyBeeble App, this will automatically fill in the Zip Code based on your present location.

In the field to the right (Search Radius) determine how far out from you location you would like to search, up to 200 Miles.

If you would like to refine your search some more, select the Advance Search button.

This will allow you to control the price point as well as the style of the book you are looking for.

Of course the easiest way to find exactly what you are looking for is to scan the barcode. Using your devices built in Camera, simply scan the barcode and generate your results more quickly.
